## Overview

A SafeAssign Originality Report provides detailed information about the matches found between a student's submitted work and existing sources. Both instructors and students can use the report to review submissions for originality and create opportunities to identify how to properly attribute sources rather than paraphrase. When instructors create an Final Exam (Assignment) and choose to use SafeAssign, they determine if students can see the results of the report.

The report identifies all matching blocks of text. Instructors and their students need to determine if the matching text is properly referenced. Investigating each match prevents detection errors due to differences in citing standards.

The Originality Report displays the list of potential sources, and each source is highlighted in a different color. The report can display up to 30 colors to represent 30 different sources.

## Find the report

For **Anonymous Grading** you have to grade all submissions for all students before check the Report , after you find the grades with names under your full grade center , you can check the SafeAssign.

When a SafeAssign report has finished processing, you can access it on the **Full Grade Center page**. Access the **Full Grade Center page**.

Normal Assignment

Final Exam

In the Grade Center, locate the Final Exam (Assignment) where you enabled SafeAssign. When students have made their submissions, you see the grades of the students under the final exam column. Open the cell's menu and select the attempt. (*you will see the needs grading icon for normal Assignments*)

On the Grade Final Exam (Assignment) page, a SafeAssign section appears in the grading sidebar. While the report is processing, the following statement appears: Report in progress...

In **Anonymous Grading** you will see the Percentage of matching without the report ,which mean you can't see the report before grading all submissions

When the report is ready to view, a percentage appears in the grading sidebar. Expand the SafeAssign link and select View Originality Report to view the results in a new window.

The screenshot displays a Blackboard LMS interface for a 'Grade Assignment: Opinion Paper'. The main content area shows the student's submission, including the name 'Chris Casper', course 'Introduction to Sociology', and instructor 'Dr. Cathy Chu'. The assignment title is 'Sociological Imagination: DRINKING COFFEE', and the text begins with 'Drinking a cup of coffee is a simple act. My coffee needs to be as hot as possible, black, and in my favorite cup. I'll wash my cup if it isn't available. The cup needs to sit next to the percolator in anticipation. I...'. The right-hand sidebar, titled 'Assignment Details', shows the 'GRADE' as '/100' and the 'ATTEMPT' as '9/28/17 4:19 PM' with a score of '/100'. Below this, the 'SafeAssign' link is highlighted with a blue border and shows a '29% overall match'. An orange arrow points from this link to a pop-up window that has opened. This pop-up window also shows the 'SafeAssign' link with a '29% overall match' and a 'View Originality Report' button highlighted with an orange border.

## View the Originality Report

View the SafeAssign Originality Report to ensure students properly cited their sources.

SafeAssign generates an Originality Report shortly after a student submits an attempt, even before you post grades. The SafeAssign Originality Report appears next to the submission so you can view the analysis in context. This is a preview of the report's results and includes three sections: Overall Risk, Overall Text Matching, and Originality Reports.

- Overall Risk shows whether the attempt is a low, medium, or high risk for plagiarism. The risk level is determined based on the average text matching range the attempt falls in.
- Overall Text Matching shows the average and highest text match for the pieces of the attempt, including file attachments. Want to dive in? Select any of the items in the Originality Reports section to view the full reports.
- Originality Reports shows you the percent of potential matching text for each piece of your submission, including questions and attachments. Select any of the entries in the list to view the results in a new window.

The people who are doing this job are literally poisoning themselves and others. Most PCs and electronic gadgets contain circuit boards packed with toxic metals like zinc, nickel, and chromium. Even the plastics contain toxic flame-retardant chemicals (Gies 2009). By recycling electronics with no safety precautions, the recyclers are exposing themselves, their neighbors and their environment to lead, cadmium, mercury that can damage almost every organ and system in the human body (Fox 2009). **In the Chinese province of Guiyu, women were heating circuit boards over a coal fire, pulling out chips and pouring off the lead solder. Pollution has ruined the town. Drinking water is trucked in. Scientists have studied the area and discovered that Guiyu has the highest levels of cancer-causing dioxins in the world. They found pregnancies are six times more likely to end in miscarriage and that seven out of ten kids have too much lead in their blood (CBS News 2009).** To fully understand this whole e-trash management problem, it is impor-

Sources that matches the submitted paper's text are listed in the right panel of the report. Select the source type to learn more about the match. For each source, a number appears which corresponds with the highlighted text in the submission. Next to the source, you can select Highlight match to toggle highlighting. You can also select Open match source to visit the matching source text in a new window.

If Another student's paper is listed as a citation, the submission is associated with another institution and you may not be able to view it due to privacy laws.

*When a student's submission is deleted from a course, the content remains in the database and can be used to detect future matches for other student submissions. A "non-existent paper" is listed as a source in the Originality Report in this case. SafeAssign detects a match, but you can't open the source to compare matches because the source has been deleted.*

When you reduce the width of the viewing area, this information appears at the top.
